

Gitlab workflow

1. Sign up for <https://gitlab.se.ifmo.ru>
2. Add your login to the google sheets list, which can be found in the group
3. After that, you will be allocated a separate repository for each assignment. Creating a repository takes from 5 to 30 minutes.
4. In this repository, you need to develop in a branch development
5. Once you decide that the assignment is ready, you need to create a merge request in the master branch. You need to add one of the course teachers to reviewers
6. Further communication, code review, testing will take place through this merge request
7. All corrections must go through one merge request. **You don't need to create separate merge requests after each fix.**
8. After the merge request received approval and merged in the master assignment is considered complete
